

SABI by Destino Seguro licences CMS' software to deliver a major step change in driver safety and fleet risk management, in Colombia, and across Latin America.

London, UK, Bogota, Colombia (29 September 2020): SABI by Destino Seguro, Colombia's leading logistics management company, has partnered with Collision Management Systems (CMS), a world leader in telematics data aggregation and fleet risk management software, to deliver a new and stunning level of safety solutions to fleets across Colombia and Latin America

The agreement will see CMS's software analyse data from tens of thousands of journeys, every day. Data from over forty different telematics systems, dispatch software, toll booths and vehicle inspections, will all be aggregated, standardised, and analysed.

With over 70% of logistics journeys in Colombia managed and monitored by SABI, this move means almost every fleet in the country will have immediate access to data driven safety solutions. Plus, SABI, through monitoring every journey to ensure its safety, will also deliver proven insights to key insurance carriers operating in the market. All this resulting in a significant reduction in claims.

Additionally, SABI's close work with the Colombian government, means the information this program will provide, will aid immensely in the management of both the existing transport network and future infrastructure development plans. Particularly as the country recovers from the impacts of Covid-19.

By bringing all this data together, CMS will provide clear, concise, actionable data at the right time, and in one place.

Luis Anaya, CEO of SABI by Destino Seguro said *"CMS's technology platform will integrate with our existing digital ecosystem, to provide a huge improvement in helping our customers. Most importantly, this will save lives while also improving efficiencies, to deliver cost savings."* He added *"The CMS platform automatically provides solutions and responses by integrating data from a staggering range of data sources, including our logistics management Software, SCL3, which has been helping our customers for more than fifteen years."*

For CMS, Charles Smith, CEO commented *"This partnership with SABI is a fantastic opportunity to take our market leading technology to an unprecedented scale. One which will make significant improvements in safety. Additionally, SABI's partnership with the Colombian government, takes our technology into projects which will map out the very future of the country's transport infrastructure and policies. As such, this is an incredibly exciting step for CMS, and great testament to the robust and scalable nature of our Data Aggregation and Risk Management platform"*
